FROM THE PRESIDENT & CEO

Summer: Time for the 'electric shift' and preparing for winter

by **Wayne Miller**
President & CEO

SUMMER means vacations and picnics. For many, it's a time for taking a well-deserved mid-year break. But for electric co-ops, it's also a very busy time. We're clearing rights-of-way, inspecting poles and asking members to be mindful of their use of electricity when it comes to how and when they operate appliances on hot summer days.

Electric shift

For years, Valley REC has asked members to "do the electric shift" on hot summer days. This year is no different, but the effort is as important as it's ever been.

Shifting includes bumping up your air conditioning thermostat to 78 degrees or using fans. You can also close curtains and blinds and turn off nonessential lighting. Other ways to curtail use during times of peak demand are to cook with your gas grill or microwave instead of using an electric range or oven, and to run washers, dryers and other appliances either in the early morning or in the late evening.

In the summer, the demand for (and cost of) electricity is the greatest on hot muggy weekdays between the hours of 1 and 6 p.m. Listen for electric shift messages on Froggy 98 and HUNNY 106 radio stations. Doing your part by shifting your normal patterns can help the co-op as a whole in a big way.

Here's why your "shifting" matters. Valley REC members are fortunate that nearly 70 percent of the electricity they use is supplied through Allegheny Electric Cooperative, Inc. (Allegheny), owned by the 14 electric co-ops in Pennsylvania and New Jersey. Allegheny owns and operates the hydroelectric plant at Lake Raystown and has 10 per-

cent ownership in the Susquehanna nuclear plant in Berwick, along with long-term contracts for electricity generated on the Niagara and St. Lawrence rivers. Allegheny provides electricity at rates that are largely shielded from price fluctuations caused by supply and demand.

However, the other roughly 30 percent of our electricity is purchased on the open market where pricing can be volatile. Curbing our collective consumption during periods of peak demand lessens the amount of electricity purchased when prices are highest.

Demand response

Our demand response program is another example of members working together to exercise some level of control over costs. Co-op consumers who volunteer to have a demand response unit (DRU) installed on their electric water heater or other heating/cooling equipment make the program work. When demand reaches a high level, operators at Allegheny send a signal to the DRUs to temporarily switch off the equipment. While the summertime peaks mentioned above are typically between 1 and 6 p.m. weekdays, peaks can occur throughout the year, triggering activation of DRUs at various times on weekdays between 7 a.m. and 10 p.m.

Water heaters are the focus of Valley REC's demand response effort since they are well-insulated and can keep water hot even while not using electricity.

We've been working hard in the first half of the year to expand our demand response program, but we'd like to recruit even more participants in the next six months. Please consider a DRU for your home. Contact us at 800/432-0680 for program details. Qualifying participants are eligible for a \$25 bill

(continued on page 12d)

Please help unclaimed capital credits find a home

LATE LAST YEAR, more than \$930,000 in capital credits refunds were distributed to eligible members and former members of the co-op.

Since that time, more than 200 of those checks were returned by the post office because of incorrect address information.

We are making every effort to return this money to its rightful owners.

Listed on the following pages are the names of the consumers whose checks have not been able to be delivered.

If you recognize a name and can provide an up-to-date address (or information about the executor of the estate or nearest relative if the member is deceased), please call us at 814/643-2650 or toll-free 800/432-0680.

You can also write the Capital Credits Department, Valley REC, P.O. Box 477, Huntingdon, PA16652-0477.

Your cooperation is greatly appreciated.

credit and rebates on water heater pur-
 chases.

Pole inspections

Summer also means our annual pole inspection effort is underway. Valley REC has contracted with Osmose Utilities Service, Inc. for the work, which examines poles for deficiencies such as ground rot. Osmose employees will access rights-of-way to reach poles. The inspection work will run through early fall and will take place in all three districts (Huntingdon, Martinsburg and Shade Gap).

Our annual aerial inspection will wrap up by the end of this month. While our pole inspections give us a bottom-up check on the poles, our aerial inspection of rights-of-way, for planning tree trimming, provides a top-down look at poles. During the helicopter flyover of our lines, we can visually check crossarms and insulators for cracks or other damage while looking at tree growth along the power lines. The vegetation management work we're doing now can save the co-op thousands of dollars in damages when storms hit, whether that's a severe summer thunderstorm now, or heavy snow and ice this winter. ☀

You can help cool future power costs

Our **future electric rates** are partially **based on how much power you use** on hot, humid weekdays **between 1 and 6 p.m.** this summer. When you hear an announcement from your local electric cooperative about doing the "Electric Shift," try these simple steps:

- ▶ Set air conditioners at 78 degrees or use fans instead.
- ▶ Close curtains and blinds to keep things cooler.
- ▶ Operate washers, dryers, dishwashers, stoves and other major appliances in early morning or evening.
- ▶ Minimize the number of times you open your refrigerator and freezer.
- ▶ Cook with an outdoor grill or a microwave oven.
- ▶ Turn off any non-essential lights.
- ▶ Run pool pumps at night.
